Node / Express

Python

GraphQL

SQL / NoSQL

Redis

Docker

### CERTIFICATIONS

Oracle Certified Java Professional

## PROFILE

Staff Software Engineer with 9+ years of experience in full stack web application development. Self motivated problem solver with a broad exposure to different systems and technologies. Comfortable working in fast paced, dynamic environments with a passion for mentoring and teaching others.

## EMPLOYMENT HISTORY

### Staff Software Engineer for UserVoice

2017 - Present

- Full stack engineer using React, Web Components, Go, Ruby on Rails, and MySQL to build performant, high volume web applications
- Architected and implemented SOC2 compliant authentication system for all customer-facing applications
- Organized engineering efforts to establish GDPR compliance throughout products and services
- Established company-wide frontend stack, leveraging TypeScript, React, Apollo GraphQL, and Material UI to improve app load times by > 400%
- Created private NPM registry and packages for sharing resources between codebases
- Devised migration strategies for iteratively moving existing AngularJS applications to new React stack
- Constructed automated spam detection platform by integrating third-party services and pattern detection methods
- Worked with team to create new billing and permissions services
- Mentored and collaborated with teammates to promote coding best practices
- Presented technical talks to department spanning topics such as React, GraphQL, caching, and metrics/monitoring

### Software Engineer for WebAssign

2015 - 2017

- Full stack engineer responsible for building new, user facing, applications using MEAN stack
- Served as Subject Matter Expert for front-end development
- Worked with team in building new frameworks and establishing best practices for modern web applications
- Developed component-based front-end to meet W3C accessibility standards

### Software Engineer for CapTech Consulting

2014 - 2015

- Worked with Directors to develop company-wide application for generating organizational charts
- Member of Global Resource Management Team responsible for creating company-wide tools and applications

### Java Software Engineer for Bank of America

- Worked with team of developers in constructing new check image processing system
- Implemented new partitioning strategy for Oracle database
- Designed and build automated system for end-to-end regression testing

### Java / Mobile Web Developer for Capital One

- Worked with team to provide triage for mobile apps and web services
